

MACmark - MACal Glass Decor 700 BF

A repositionable translucent, high-performance indoor and outdoor window film, producing an etched, frosted effect with Bubble-free adhesive

GlassDecor 798-01 BF is a version with Bubble-free micro-textured adhesive for a perfect application in record time of your decoration (dry application). The micro-texture of the channels drawn in the adhesive is so small as to be invisible on the surface, rendering a perfectly smooth surface appearance.

A material for making the most of glass or plexiglass windows - indoors and outdoors. This highly luminous translucent window film delivers reliable permanent decoration. Available in both dusted and frosted ('spangled' and 'sanded') matt finishes, and in 5 colours: Offshore Blue, Fresh Mint, Sparkling Yellow, Romantic Rose and Gold. An outstanding choice for bringing internal displays and outside windows to life. Outdoor durability is 5 years, and fire certification is M1.
